Bed Bug Information:

Bed bugs are small insects that feed on human blood. A newly hatched bed bug is semi-transparent, light tan in color, and the size of a poppy seed. Adult bed bugs are flat, have rusty-red-colored oval bodies, and are about the size of an apple seed. Some common areas that bed bugs leave behind blood stains, droppings and eggs are on mattresses, crevices and cracks of furniture, and baseboards of walls.

Bed bugs are most active at night, they need a blood meal to grow and lay eggs. A female bed bug can lay 5-7 eggs per week, eggs take about 10 days to hatch. A fully grown bed bug grows in 2 to 4 months and can live as long as a year.

Some health effects that bed bugs can have on a person are itchy and irritating bites to the skin, Anxiety attacks about being bitten, which can lead to sleeplessness.

Bed bugs can enter homes by latching onto used furniture, luggage and clothing, and by traveling along connecting pipes and wiring. To prevent this from happening, use caution if you suspect that there is bed bug infestation present.

Sealing cracks and crevices with ca<mark>ulk,</mark> always clean<mark>ing and disinfecting your home on a daily bas</mark>is a<mark>nd</mark> getting rid of clutter can reduce the places bed bugs could hide, and vacuuming every inch of your home on a daily basis can help reduce chances of getting bed bugs and/or getting rid of bed bugs.

Please notify the management office IMMEDIENTLY if you suspect or have bed bug infestation, or any

kind of pest problem.
